SIMON BRADSHAW

The Practical Mariner's Book of Knowledge

420 Sea-Tested Rules of Thumb for almost Every Boating Situation

A quick reference for almost every sea going problem or issue from Sail to Power, Navigation to Knots, Rules of the road to Rules of Thumb

THE LATEST BOOK BY

John Vigor. A sailor with over 10,000 sea miles and former editor of *Sea Magazine*. 1987 John and his family sailed from South Africa to Florida in a 31 foot sailing boat. John writes with humor and knowledge

HOW IS THE BOOK SET OUT?

The book is set out as an A to Z of Rules of Thumb. Some of the rules are not so much of thumb and of whole hand but all are useful and a good many with save time, money and / or embarrassment.

HOW WILL THIS BOOK BENEFIT ME?

As a small boat owner this book may well enable you to talk with Marine Engineers on level playing field, you can speak with knowledge about displacement to length ratios (page D49), Propellor Efficiency page P123, or the brightness of Navigation lights page N107. This book may well enable you to afford to sail or power more, to maintain your own boat.

Whether you are a seasoned old salt or are new to boating this is the book for you. Rarely a month goes by without my referencing this book.

As a bed side read a couple of pages each evening this book is worth every penny of its purchase price £10.99 at Amazon.
